FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS—Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS—Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS—Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES—The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS—In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*
Location of manufacturing plants by industry, county, and employment size.
Part 1.—Food and kindred products; tobacco products, Special Report MC58(S)-2.1.

U. S. Government Printing Office, Washington, D. C., 1961.

Foreword

This publication presents Census information for each of approximately 425 different manufacturing industries, showing in detail the county location and employment size class of each plant in the industry. In the Census volumes, actual figures on employment and other measures cannot be published in such industry-area-size precision without disclosing figures for individual companies. Accordingly, the publication fills in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross-classified by industry, county, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analysis or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this series constitute a continuation of the series initiated with the 1954 Census of Manufactures as a joint undertaking with the Office of Area Development. The Business and Defense Services Administration has provided the necessary financial assistance for making possible the publication of the 1958 set of reports.

The Location of Manufacturing Plants data for 1958, as well as those for 1954, were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in industry, State, and county sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, "Industry Statistics," of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, "Summary Statistics," and Volume III, "Area Statistics." A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction in any of the 1958 Census of Manufactures volumes.

2. The States are tabulated within each industry by Census Bureau regional groupings. This sequence was followed so that easy reference can be made to the 1958 Census of Manufactures table that contains related statistics (such as employment, payroll, man-hours, value added by manufacture, and capital expenditures) for the particular industry and State. (See 1958 Census of Manufactures, Volume II.) Only the Continental U. S. is included in this report. Territories and possessions are excluded. Note that each State title line is followed by the region to which the State is assigned (i.e., "MAINE--NEW ENGLAND"). The Census regional-State sequence used in the report is as follows:

New England
Maine
New Hampshire
Vermont
Massachusetts
Rhode Island
Connecticut

Middle Atlantic
New York
New Jersey
Pennsylvania

East North Central
Ohio
Indiana
Illinois
Michigan
Wisconsin

West North Central
Minnesota
Iowa
Missouri
North Dakota
South Dakota
Nebraska
Kansas

South Atlantic
Delaware
Maryland
District of Columbia
Virginia
West Virginia
North Carolina
South Carolina
Georgia
Florida

East South Central
Kentucky
Tennessee
Alabama
Mississippi

West South Central
Arkansas
Louisiana
Oklahoma
Texas

Mountain
Montana
Idaho
Wyoming
Colorado
New Mexico
Arizona
Utah
Nevada

Pacific
Washington
Oregon
California

3. All counties having one or more plants in an industry appear in alphabetical sequence within each State.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure represents the average employment of the four mid-month payroll periods in March, May, August, and November. The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size, but are approximations to the annual average for 1958.

Average Employment by Industry and Size Class for Industry Groups

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table, "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employess	1,000 or more employees

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES—The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*

Location of manufacturing plants by industry, county, and employment size. Part 2.—Textile mill products; apparel and related products; leather and leather products, Special Report MC58(S)-2.2.

U. S. Government Printing Office, Washington, D. C., 1961.

Foreword

This publication presents Census information for each of approximately 425 different manufacturing industries, showing in detail the county location and employment size class of each plant in the industry. In the Census volumes, actual figures on employment and other measures cannot be published in such industry-area-size precision without disclosing figures for individual companies. Accordingly, the publication fills in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross-classified by industry, county, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analysis or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this series constitute a continuation of the series initiated with the 1954 Census of Manufactures as a joint undertaking with the Office of Area Development. The Business and Defense Services Administration has provided the necessary financial assistance for making possible the publication of the 1958 set of reports.

The Location of Manufacturing Plants data for 1958, as well as those for 1954, were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in industry, State, and county sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, "Industry Statistics," of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, "Summary Statistics," and Volume III, "Area Statistics." A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction in any of the 1958 Census of Manufactures volumes.

2. The States are tabulated within each industry by Census Bureau regional groupings. This sequence was followed so that easy reference can be made to the 1958 Census of Manufactures table that contains related statistics (such as employment, payroll, man-hours, value added by manufacture, and capital expenditures) for the particular industry and State. (See 1958 Census of Manufactures, Volume II.) Only the Continental U. S. is included in this report. Territories and possessions are excluded. Note that each State title line is followed by the region to which the State is assigned (i.e., "MAINE--NEW ENGLAND"). The Census regional-State sequence used in the report is as follows:

New England
Maine
New Hampshire
Vermont
Massachusetts
Rhode Island
Connecticut

Middle Atlantic
New York
New Jersey
Pennsylvania

East North Central
Ohio
Indiana
Illinois
Michigan
Wisconsin

West North Central
Minnesota
Iowa
Missouri
North Dakota
South Dakota
Nebraska
Kansas

South Atlantic
Delaware
Maryland
District of Columbia
Virginia
West Virginia
North Carolina
South Carolina
Georgia
Florida

East South Central
Kentucky
Tennessee
Alabama
Mississippi

West South Central
Arkansas
Louisiana
Oklahoma
Texas

Mountain
Montana
Idaho
Wyoming
Colorado
New Mexico
Arizona
Utah
Nevada

Pacific
Washington
Oregon
California

3. All counties having one or more plants in an industry appear in alphabetical sequence within each State.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure represents the average employment of the four mid-month payroll periods in March, May, August, and November. The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size, but are approximations to the annual average for 1958.

AVERAGE EMPLOYMENT BY INDUSTRY AND SIZE CLASS FOR INDUSTRY GROUPS INCLUDED IN THIS PUBLICATION

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employees	1,000 or more employees

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*

Location of manufacturing plants by industry, county, and employment size.
Part 3.—Lumber and wood products; furniture and fixtures, Special Report MC58(S)-2.3.

U. S. Government Printing Office, Washington, D. C., 1961.

Foreword

This publication presents Census information for each of approximately 425 different manufacturing industries, showing in detail the county location and employment size class of each plant in the industry. In the Census volumes, actual figures on employment and other measures cannot be published in such industry-area-size precision without disclosing figures for individual companies. Accordingly, the publication fills in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross-classified by industry, county, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analysis or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this series constitute a continuation of the series initiated with the 1954 Census of Manufactures as a joint undertaking with the Office of Area Development. The Business and Defense Services Administration has provided the necessary financial assistance for making possible the publication of the 1958 set of reports.

The Location of Manufacturing Plants data for 1958, as well as those for 1954, were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in industry, State, and county sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, "Industry Statistics," of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, "Summary Statistics," and Volume III, "Area Statistics." A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction in any of the 1958 Census of Manufactures volumes.

2. The States are tabulated within each industry by Census Bureau regional groupings. This sequence was followed so that easy reference can be made to the 1958 Census of Manufactures table that contains related statistics (such as employment, payroll, man-hours, value added by manufacture, and capital expenditures) for the particular industry and State. (See 1958 Census of Manufactures, Volume II.) Only the Continental U. S. is included in this report. Territories and possessions are excluded. Note that each State title line is followed by the region to which the State is assigned (i.e., "MAINE--NEW ENGLAND"). The Census regional-State sequence used in the report is as follows:

New England
Maine
New Hampshire
Vermont
Massachusetts
Rhode Island
Connecticut

Middle Atlantic
New York
New Jersey
Pennsylvania

East North Central
Ohio
Indiana
Illinois
Michigan
Wisconsin

West North Central
Minnesota
Iowa
Missouri
North Dakota
South Dakota
Nebraska
Kansas

South Atlantic
Delaware
Maryland
District of Columbia
Virginia
West Virginia
North Carolina
South Carolina
Georgia
Florida

East South Central
Kentucky
Tennessee
Alabama
Mississippi

West South Central
Arkansas
Louisiana
Oklahoma
Texas

Mountain
Montana
Idaho
Wyoming
Colorado
New Mexico
Arizona
Utah
Nevada

Pacific
Washington
Oregon
California

3. All counties having one or more plants in an industry appear in alphabetical sequence within each State.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure represents the average employment of the four mid-month payroll periods in March, May, August, and November. The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size, but are approximations to the annual average for 1958.

AVERAGE EMPLOYMENT BY INDUSTRY AND SIZE CLASS FOR INDUSTRY GROUPS INCLUDED IN THIS PUBLICATION

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employees	1,000 or more employees

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS—Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS—Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES—The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*

Location of manufacturing plants by industry, county, and employment size.
Part 4.--Paper and allied products; printing and publishing, Special Report MC58(S)-2.4.

U. S. Government Printing Office, Washington, D. C., 1961.

Foreword

This publication presents Census information for each of approximately 425 different manufacturing industries, showing in detail the county location and employment size class of each plant in the industry. In the Census volumes, actual figures on employment and other measures cannot be published in such industry-area-size precision without disclosing figures for individual companies. Accordingly, the publication fills in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross-classified by industry, county, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analysis or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this series constitute a continuation of the series initiated with the 1954 Census of Manufactures as a joint undertaking with the Office of Area Development. The Business and Defense Services Administration has provided the necessary financial assistance for making possible the publication of the 1958 set of reports.

The Location of Manufacturing Plants data for 1958, as well as those for 1954, were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in industry, State, and county sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, "Industry Statistics," of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, "Summary Statistics," and Volume III, "Area Statistics." A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction in any of the 1958 Census of Manufactures volumes.

2. The States are tabulated within each industry by Census Bureau regional groupings. This sequence was followed so that easy reference can be made to the 1958 Census of Manufactures table that contains related statistics (such as employment, payroll, man-hours, value added by manufacture, and capital expenditures) for the particular industry and State. (See 1958 Census of Manufactures, Volume II.) Only the Continental U. S. is included in this report. Territories and possessions are excluded. Note that each State title line is followed by the region to which the State is assigned (i.e., "MAINE--NEW ENGLAND"). The Census regional-State sequence used in the report is as follows:

New England
Maine
New Hampshire
Vermont
Massachusetts
Rhode Island
Connecticut

Middle Atlantic
New York
New Jersey
Pennsylvania

East North Central
Ohio
Indiana
Illinois
Michigan
Wisconsin

West North Central
Minnesota
Iowa
Missouri
North Dakota
South Dakota
Nebraska
Kansas

South Atlantic
Delaware
Maryland
District of Columbia
Virginia
West Virginia
North Carolina
South Carolina
Georgia
Florida

East South Central
Kentucky
Tennessee
Alabama
Mississippi

West South Central
Arkansas
Louisiana
Oklahoma
Texas

Mountain
Montana
Idaho
Wyoming
Colorado
New Mexico
Arizona
Utah
Nevada

Pacific
Washington
Oregon
California

3. All counties having one or more plants in an industry appear in alphabetical sequence within each State.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure represents the average employment of the four mid-month payroll periods in March, May, August, and November. The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size, but are approximations to the annual average for 1958.

AVERAGE EMPLOYMENT BY INDUSTRY AND SIZE CLASS FOR INDUSTRY GROUPS INCLUDED IN THIS PUBLICATION

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employees	1,000 or more employees

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*

Location of manufacturing plants by industry, county, and employment size.
Part 5.--Chemicals and allied products; petroleum and coal products; rubber and plastic products,
Special Report MC58(S)-2.5.

U. S. Government Printing Office, Washington, D. C., 1961.

Foreword

This publication presents Census information for each of approximately 425 different manufacturing industries, showing in detail the county location and employment size class of each plant in the industry. In the Census volumes, actual figures on employment and other measures cannot be published in such industry-area-size precision without disclosing figures for individual companies. Accordingly, the publication fills in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross-classified by industry, county, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analysis or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this series constitute a continuation of the series initiated with the 1954 Census of Manufactures as a joint undertaking with the Office of Area Development. The Business and Defense Services Administration has provided the necessary financial assistance for making possible the publication of the 1958 set of reports.

The Location of Manufacturing Plants data for 1958, as well as those for 1954, were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in industry, State, and county sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, "Industry Statistics," of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, "Summary Statistics," and Volume III, "Area Statistics." A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction in any of the 1958 Census of Manufactures volumes.

2. The States are tabulated within each industry by Census Bureau regional groupings. This sequence was followed so that easy reference can be made to the 1958 Census of Manufactures table that contains related statistics (such as employment, payroll, man-hours, value added by manufacture, and capital expenditures) for the particular industry and State. (See 1958 Census of Manufactures, Volume II.) Only the Continental U. S. is included in this report. Territories and possessions are excluded. Note that each State title line is followed by the region to which the State is assigned (i.e., "MAINE--NEW ENGLAND"). The Census regional-State sequence used in the report is as follows:

New England
Maine
New Hampshire
Vermont
Massachusetts
Rhode Island
Connecticut

Middle Atlantic
New York
New Jersey
Pennsylvania

East North Central
Ohio
Indiana
Illinois
Michigan
Wisconsin

West North Central
Minnesota
Iowa
Missouri
North Dakota
South Dakota
Nebraska
Kansas

South Atlantic
Delaware
Maryland
District of Columbia
Virginia
West Virginia
North Carolina
South Carolina
Georgia
Florida

East South Central
Kentucky
Tennessee
Alabama
Mississippi

West South Central
Arkansas
Louisiana
Oklahoma
Texas

Mountain
Montana
Idaho
Wyoming
Colorado
New Mexico
Arizona
Utah
Nevada

Pacific
Washington
Oregon
California

3. All counties having one or more plants in an industry appear in alphabetical sequence within each State.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure represents the average employment of the four mid-month payroll periods in March, May, August, and November. The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size, but are approximations to the annual average for 1958.

AVERAGE EMPLOYMENT BY INDUSTRY AND SIZE CLASS FOR INDUSTRY GROUPS INCLUDED IN THIS PUBLICATION

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employees	1,000 or more employees

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES—The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*

Location of manufacturing plants by industry, county, and employment size.
Part 6.-Stone, clay, and glass products; miscellaneous manufactures, Special Report MC58(S)-2.6.

U. S. Government Printing Office, Washington, D. C., 1961.

Foreword

This publication presents Census information for each of approximately 425 different manufacturing industries, showing in detail the county location and employment size class of each plant in the industry. In the Census volumes, actual figures on employment and other measures cannot be published in such industry-area-size precision without disclosing figures for individual companies. Accordingly, the publication fills in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross-classified by industry, county, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analysis or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this series constitute a continuation of the series initiated with the 1954 Census of Manufactures as a joint undertaking with the Office of Area Development. The Business and Defense Services Administration has provided the necessary financial assistance for making possible the publication of the 1958 set of reports.

The Location of Manufacturing Plants data for 1958, as well as those for 1954, were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in industry, State, and county sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, "Industry Statistics," of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, "Summary Statistics," and Volume III, "Area Statistics." A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction in any of the 1958 Census of Manufactures volumes.

2. The States are tabulated within each industry by Census Bureau regional groupings. This sequence was followed so that easy reference can be made to the 1958 Census of Manufactures table that contains related statistics (such as employment, payroll, man-hours, value added by manufacture, and capital expenditures) for the particular industry and State. (See 1958 Census of Manufactures, Volume II.) Only the Continental U. S. is included in this report. Territories and possessions are excluded. Note that each State title line is followed by the region to which the State is assigned (i.e., "MAINE--NEW ENGLAND"). The Census regional-State sequence used in the report is as follows:

New England
Maine
New Hampshire
Vermont
Massachusetts
Rhode Island
Connecticut

Middle Atlantic
New York
New Jersey
Pennsylvania

East North Central
Ohio
Indiana
Illinois
Michigan
Wisconsin

West North Central
Minnesota
Iowa
Missouri
North Dakota
South Dakota
Nebraska
Kansas

South Atlantic
Delaware
Maryland
District of Columbia
Virginia
West Virginia
North Carolina
South Carolina
Georgia
Florida

East South Central
Kentucky
Tennessee
Alabama
Mississippi

West South Central
Arkansas
Louisiana
Oklahoma
Texas

Mountain
Montana
Idaho
Wyoming
Colorado
New Mexico
Arizona
Utah
Nevada

Pacific
Washington
Oregon
California

3. All counties having one or more plants in an industry appear in alphabetical sequence within each State.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure represents the average employment of the four mid-month payroll periods in March, May, August, and November. The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size, but are approximations to the annual average for 1958.

AVERAGE EMPLOYMENT BY INDUSTRY AND SIZE CLASS FOR INDUSTRY GROUPS INCLUDED IN THIS PUBLICATION

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes.)

Code	Product	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employees	1,000 or more employees

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES—The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*

Location of manufacturing plants by industry, county, and employment size.
Part 7.—Primary metal industries; fabricated metal products, Special Report MC58(S)-2.7.

U. S. Government Printing Office, Washington, D. C., 1961.

Foreword

This publication presents Census information for each of approximately 425 different manufacturing industries, showing in detail the county location and employment size class of each plant in the industry. In the Census volumes, actual figures on employment and other measures cannot be published in such industry-area-size precision without disclosing figures for individual companies. Accordingly, the publication fills in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross-classified by industry, county, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analysis or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this series constitute a continuation of the series initiated with the 1954 Census of Manufactures as a joint undertaking with the Office of Area Development. The Business and Defense Services Administration has provided the necessary financial assistance for making possible the publication of the 1958 set of reports.

The Location of Manufacturing Plants data for 1958, as well as those for 1954, were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in industry, State, and county sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, "Industry Statistics," of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, "Summary Statistics," and Volume III, "Area Statistics." A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction in any of the 1958 Census of Manufactures volumes.

2. The States are tabulated within each industry by Census Bureau regional groupings. This sequence was followed so that easy reference can be made to the 1958 Census of Manufactures table that contains related statistics (such as employment, payroll, man-hours, value added by manufacture, and capital expenditures) for the particular industry and State. (See 1958 Census of Manufactures, Volume II.) Only the Continental U. S. is included in this report. Territories and possessions are excluded. Note that each State title line is followed by the region to which the State is assigned (i.e., "MAINE--NEW ENGLAND"). The Census regional-State sequence used in the report is as follows:

New England
Maine
New Hampshire
Vermont
Massachusetts
Rhode Island
Connecticut

Middle Atlantic
New York
New Jersey
Pennsylvania

East North Central
Ohio
Indiana
Illinois
Michigan
Wisconsin

West North Central
Minnesota
Iowa
Missouri
North Dakota
South Dakota
Nebraska
Kansas

South Atlantic
Delaware
Maryland
District of Columbia
Virginia
West Virginia
North Carolina
South Carolina
Georgia
Florida

East South Central
Kentucky
Tennessee
Alabama
Mississippi

West South Central
Arkansas
Louisiana
Oklahoma
Texas

Mountain
Montana
Idaho
Wyoming
Colorado
New Mexico
Arizona
Utah
Nevada

Pacific
Washington
Oregon
California

3. All counties having one or more plants in an industry appear in alphabetical sequence within each State.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure represents the average employment of the four mid-month payroll periods in March, May, August, and November. The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size, but are approximations to the annual average for 1958.

AVERAGE EMPLOYMENT BY INDUSTRY AND SIZE CLASS FOR INDUSTRY GROUPS INCLUDED IN THIS PUBLICATION

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employees	1,000 or more employees

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS--Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS--Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES--The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS--In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*

Location of manufacturing plants by industry, county, and employment size.
Part 8.—Machinery, except electrical; electrical machinery, Special Report MC58(S)-2.8.

U. S. Government Printing Office, Washington, D. C., 1961.

Foreword

This publication presents Census information for each of approximately 425 different manufacturing industries, showing in detail the county location and employment size class of each plant in the industry. In the Census volumes, actual figures on employment and other measures cannot be published in such industry-area-size precision without disclosing figures for individual companies. Accordingly, the publication fills in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross-classified by industry, county, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analysis or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this series constitute a continuation of the series initiated with the 1954 Census of Manufactures as a joint undertaking with the Office of Area Development. The Business and Defense Services Administration has provided the necessary financial assistance for making possible the publication of the 1958 set of reports.

The Location of Manufacturing Plants data for 1958, as well as those for 1954, were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in industry, State, and county sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, "Industry Statistics," of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, "Summary Statistics," and Volume III, "Area Statistics." A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction in any of the 1958 Census of Manufactures volumes.

2. The States are tabulated within each industry by Census Bureau regional groupings. This sequence was followed so that easy reference can be made to the 1958 Census of Manufactures table that contains related statistics (such as employment, payroll, man-hours, value added by manufacture, and capital expenditures) for the particular industry and State. (See 1958 Census of Manufactures, Volume II.) Only the Continental U. S. is included in this report. Territories and possessions are excluded. Note that each State title line is followed by the region to which the State is assigned (i.e., "MAINE--NEW ENGLAND"). The Census regional-State sequence used in the report is as follows:

New England
Maine
New Hampshire
Vermont
Massachusetts
Rhode Island
Connecticut

Middle Atlantic
New York
New Jersey
Pennsylvania

East North Central
Ohio
Indiana
Illinois
Michigan
Wisconsin

West North Central
Minnesota
Iowa
Missouri
North Dakota
South Dakota
Nebraska
Kansas

South Atlantic
Delaware
Maryland
District of Columbia
Virginia
West Virginia
North Carolina
South Carolina
Georgia
Florida

East South Central
Kentucky
Tennessee
Alabama
Mississippi

West South Central
Arkansas
Louisiana
Oklahoma
Texas

Mountain
Montana
Idaho
Wyoming
Colorado
New Mexico
Arizona
Utah
Nevada

Pacific
Washington
Oregon
California

3. All counties having one or more plants in an industry appear in alphabetical sequence within each State.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure represents the average employment of the four mid-month payroll periods in March, May, August, and November. The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size, but are approximations to the annual average for 1958.

AVERAGE EMPLOYMENT BY INDUSTRY AND SIZE CLASS FOR INDUSTRY GROUPS INCLUDED IN THIS PUBLICATION

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--

FINAL REPORTS OF THE 1958 CENSUS OF MANUFACTURES

AREA REPORTS--Each report contains an introductory text and the following data for each State or area for 1958: statistics on value of shipments, value added by manufacture, employment, payrolls, man-hours, new capital expenditures, and number of manufacturing establishments for important industries and industry groups, with historical comparisons. For the State's important metropolitan statistical areas and larger counties, similar data are shown by industry groups. Totals for all manufacturing industries are shown for the items listed above (except value of shipments) for all counties, standard metropolitan statistical areas, and cities with 10,000 or more population. The number of establishments in each major industry group is presented by size of establishment within county. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

INDUSTRY REPORTS—Each report contains an introductory text and data for groups of related manufacturing industries showing for each industry for 1958: statistics on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, man-hours, inventories, new capital expenditures, and number of manufacturing establishments. Selected statistics are included for earlier census years. Value of shipments, cost of materials, capital expenditures, and employment and payroll data are shown for each industry by geographic region and State. Number of employees, value added by manufacture, and number of establishments are shown by size class of establishment within industry. Data are provided on selected measures for specialized product plants. These statistics are based on the new Standard Industrial Classification (July 1957 edition).

SUBJECT REPORTS—Each report contains introductory text and detailed statistics for an individual subject, such as size of establishments, inventories, new capital expenditures, fuels and electric energy, and important materials consumed.

VOLUMES—The Industry, Area, and Subject reports described above will be assembled and issued as three separately bound volumes, together with full explanatory texts and appendixes. In addition, there will be a general summary chapter in each of the volumes, summary statistics chapters for major industry groups in the Industry Volume, and summary statistics chapters for geographic divisions in the Area Volume.

SPECIAL REPORTS—In addition to the reports described above, a series of special reports will also be issued. These reports will cover: the number of manufacturing plants classified by 4-digit industry, county, and employment size; indexes of physical volume of production; and other subjects to be announced at a later date.

Library of Congress Card No. A61-9403

SUGGESTED CITATION

U. S. Bureau of the Census. *U. S. Census of Manufactures: 1958.*

Location of manufacturing plants by industry, county, and employment size.
Part 9.—Transportation equipment; instruments and related products, Special Report MC58(S)-2.9.

U. S. Government Printing Office, Washington, D. C., 1961.

Foreword

This publication presents Census information for each of approximately 425 different manufacturing industries, showing in detail the county location and employment size class of each plant in the industry. In the Census volumes, actual figures on employment and other measures cannot be published in such industry-area-size precision without disclosing figures for individual companies. Accordingly, the publication fills in many of the data gaps necessarily arising in the regular 1958 Census of Manufactures published tables. For many analytical purposes, aggregates are not needed. Instead, the detailed count of manufacturing plants in this publication, cross-classified by industry, county, and size provides a revealing picture that will be useful to: (a) those involved in economic development programs at the regional, State, and local area levels; (b) those engaged in industrial market analysis or allocation of sales territories; and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems.

Acknowledgments

The nine parts of this series constitute a continuation of the series initiated with the 1954 Census of Manufactures as a joint undertaking with the Office of Area Development. The Business and Defense Services Administration has provided the necessary financial assistance for making possible the publication of the 1958 set of reports.

The Location of Manufacturing Plants data for 1958, as well as those for 1954, were prepared by the Bureau of the Census from the basic computer records which had been used for the standard Census Industry and Area reports. These "Location" reports were planned and readied for publication in the Industry Division under the general supervision of Irving Rottenberg by Arthur W. Horowitz, Chief, Establishment Statistics. The review of the 1958 industry and geographic data for completeness and accuracy was a division-wide effort with the bulk of the work performed in the following commodity areas: Foods, Edward A. Robinson, Chief; Textiles, Milton Eisen, Chief; Apparel, Shirley Kallek, Chief; Lumber and Furniture, Elmer S. Biles, Chief; Paper, Printing, and Publishing, Edward D. Gruen, Chief; Chemicals, Reese R. Morgan, Chief; Metal and Metal Products, Paul F. Berard, Chief; Machinery, William R. Gray, Chief; and Electrical Machinery and Transportation Equipment, Bernard P. Bernsten, Chief. The Foods, Textiles, and Apparel areas were under the general supervision of Willis K. Jordan; the Lumber, Paper, and Chemicals area under Cyril M. Wildes; and the Metals, Machinery, and Transportation Equipment industries under Clarence H. Olsen. The application of the system of the industrial classification of establishments was coordinated by Irvin Strauss in the later stages of the census and by Isidore Bogdanoff during the earlier period. Staff assistance in statistical methods and sampling was provided by Jack L. Ogus, Assistant Division Chief for Research and Methodology.

Processing of the Census of Manufactures reports was performed in the Economic Operations Division under the supervision of Irving Weiss, Assistant Chief, Processing, assisted by Max E. Van Horn, Charles Merzel, Donald E. Young, and Wesley R. Grier. Systems and procedures were developed under the supervision of Sol Dolleck, Assistant Chief, Systems, assisted by Samuel Schweid on methods evaluation and determination, Jack Margolis on liaison and systems development, Nathan Lesowitz on development and preparation of operating procedures, and Jack Scharff, assisted by Eugene L. Wendt, on the development and supervision of electronic computer programming. Quality control plans and procedures were developed and supervised by Herman H. Fasteau, assisted by George Minton and Alfred J. McKeon. Scheduling, progress reporting, and related staff work were supervised by Wilbur J. Mathias and Margaret R. Rommel.

How To Use This Publication

The number of manufacturing plants is presented in industry, State, and county sequence, by employment size. A brief description of each of these elements is given below to assist the reader in using the tables which follow:

1. The industries included in this report appear in the "Standard Industrial Classification" (4-digit code) sequence, as published in the 1958 Census of Manufactures. A full description of each industry, its processes, and its products appears in Volume II, "Industry Statistics," of the 1958 Census. In addition, a convenient summary description of each industry appears in Appendix A of Volume I, "Summary Statistics," and Volume III, "Area Statistics." A detailed explanation of the background, procedures, and concepts in taking the census may be found in the Introduction in any of the 1958 Census of Manufactures volumes.

2. The States are tabulated within each industry by Census Bureau regional groupings. This sequence was followed so that easy reference can be made to the 1958 Census of Manufactures table that contains related statistics (such as employment, payroll, man-hours, value added by manufacture, and capital expenditures) for the particular industry and State. (See 1958 Census of Manufactures, Volume II.) Only the Continental U. S. is included in this report. Territories and possessions are excluded. Note that each State title line is followed by the region to which the State is assigned (i.e., "MAINE--NEW ENGLAND"). The Census regional-State sequence used in the report is as follows:

New England
Maine
New Hampshire
Vermont
Massachusetts
Rhode Island
Connecticut

Middle Atlantic
New York
New Jersey
Pennsylvania

East North Central
Ohio
Indiana
Illinois
Michigan
Wisconsin

West North Central
Minnesota
Iowa
Missouri
North Dakota
South Dakota
Nebraska
Kansas

South Atlantic
Delaware
Maryland
District of Columbia
Virginia
West Virginia
North Carolina
South Carolina
Georgia
Florida

East South Central
Kentucky
Tennessee
Alabama
Mississippi

West South Central
Arkansas
Louisiana
Oklahoma
Texas

Mountain
Montana
Idaho
Wyoming
Colorado
New Mexico
Arizona
Utah
Nevada

Pacific
Washington
Oregon
California

3. All counties having one or more plants in an industry appear in alphabetical sequence within each State.

4. The employment size class assigned to each plant is based on the "average" 1958 employment total reported by the plant. Both "production workers" and "all other employees" at the manufacturing plant are included in this total figure. The plant employment figure represents the average employment of the four mid-month payroll periods in March, May, August, and November. The employment size classes do not, therefore, represent "maximum" or "anticipated" employment size, but are approximations to the annual average for 1958.

AVERAGE EMPLOYMENT BY INDUSTRY AND SIZE CLASS FOR INDUSTRY GROUPS INCLUDED IN THIS PUBLICATION

(The figures shown in the table below were derived from employment and establishment figures previously published in the 1958 Census of Manufactures industry report table "Selected Statistics for Manufacturing Establishments, Classified by Employment Size." These averages were compiled to serve as an aid in using and interpreting the size class statistics shown in this report.

Data which cannot be shown without disclosing information for individual companies have been combined with figures for other size classes. A (D) appears in the column where the figure has been omitted, and the combined figure has been underlined and shown in the size class to the left. The underlined average employment figure, therefore, represents an average for two or more size classes)

Code	Industry	Average employment per establishment for--							
		All establishments	Plants with--						
			1-19 employees	20-49 employees	50-99 employees	100-249 employees	250-499 employees	500-999 employees	1,000 or more employees
